

*New & Improved!*

**EXTRA WIDE™ INTERNAL CHIMNEY SEAL**

- Extra Wide™ Seal: Coverage of 6" up to 12"**
- Easier installation**
- Reduces the need for extensions**
- Teardrop sealing fins provide superior sealing**  
*(Patent Pending)*

The Extra Wide™ 13 inch sleeves are made of rubber which conforms to the physical requirements of ASTM C-923 as modified, with a minimum <sup>3</sup>/<sub>16</sub> inch thickness for durability and resistance to puncturing or tearing. The Extra Wide™ sleeve has four pleats to provide a minimum 2 inch vertical or horizontal movement before stretching this material. Flexibility of this material allows one size to fit a frame/chimney diameter range up to 20% larger than stated size of seal.

# Stop Water Inflow!

**PREVENT** these problems from happening by installing either an internal or external chimney seal on all new manholes. Tests have shown that frame-chimney leakage begins within a year after construction. The minimal initial cost of putting a chimney seal on all new manholes is far outweighed by the long term cost savings.

**STOP** these problems in existing manholes by installing the internal chimney seal. Designed to be installed in existing manholes, this seal does not require excavation or entry into the manhole. These internal seals have the versatility to fit virtually any size or type of manhole. Thousands of these reusable seals have been installed in brick, block and precast manholes. Cretex chimney seals have a 20 year track record.

Please contact us for more information about the **CRETEX MANHOLE CHIMNEY SEALS** and all of our other related manhole products.

- **INTERNAL PIPE JOINT SEAL.** A watertight compression seal that conforms to out-of-round shapes to reduce groundwater infiltration in underground pipes.
- **INTERNAL MANHOLE JOINT SEAL.** An internal rubber sealing system for stopping leakage in precast manhole joints.

- **EXTERNAL MANHOLE JOINT SEAL.** An exterior joint seal for manholes, elliptical pipe, oval pipe, arched pipe, and boxes.
- **MANHOLE Lid SEALING PRODUCTS.** Rubber gaskets and plugs to stop inflow through existing manhole lids.
- **MANHOLE Lid LIFTER.** A tool made specifically to safely remove lids having a single concealed pick hole.
- **SURCHARGE LEVEL INDICATOR.** A high level water recording device for surcharge level indication.
